ABOUT

Developer with a background in Marketing (Estácio de Sá) and ongoing Computer Science studies (Faculdade das Américas), building real-world products at a Rio de Janeiro law firm. Over the past year I shipped a court-fee tracking dashboard used daily by the legal team, an interactive AI tools guide covering 13 practice areas, and an automated process-monitoring agent with a FastAPI backend and a Next.js real-time dashboard. I thrive at the intersection of design, data, and automation — and I'm actively deepening my back-end and Python skills.

SKILLS

Back-End	Python · FastAPI · Node.js · REST APIs · PHP
Front-End	JavaScript (ES6+) React · Next.js · HTML · CSS
Tools	Git · SQL · SheetDB · WebSocket · Active Directory · Microsoft 365
Learning	Python automation · Docker · TypeScript · Cloud fundamentals

EXPERIENCE

IT & Development Intern. · Escritório de Advocacia Zveiter (EAZ) — Rio de Janeiro

Jul 2024 – Present

- Collaborated on front-end development of the firm's institutional website (HTML/CSS/JavaScript, Art Deco design system), implementing responsive layouts, modular components, and SEO/structured-data improvements.
- Built and deployed internal tooling used in daily operations — including a court-fee tracking dashboard and an interactive AI tools guide for lawyers across 13 practice areas.
- Managed user accounts and access controls via Active Directory; supported daily workflows with Microsoft 365 and Remote Desktop tools.
- Delivered first-level IT support to ~60 internal users, resolving hardware, software, and network issues with same-day turnaround, managed asset inventory for computers, printers, and telephony systems.

Administrative Assistant · CEDAE Saúde — Rio de Janeiro

Dec 2022 – Dec 2023

- Managed document workflows, data entry, and internal communications for a public-sector health organization.
- Maintained accurate operational records using Microsoft Office and supported cross-team coordination in a fast-paced environment.

PROJECTS

Custas Diárias — Legal Fee Dashboard · HTML · CSS · Vanilla JS · SheetDB API · Google Sheets

Court-fee tracking dashboard was built for EAZ's finance and legal teams. Features include monthly sidebar navigation, client outstanding-balance view, PDF export per month, observations field per entry, and full mobile responsiveness. Connected to a live Google Sheets backend via SheetDB REST API. Used daily by the legal team in production.

AI Tools Implementation Guide · HTML · CSS · Vanilla JS (single file, no build step)

Interactive internal guide for EAZ lawyers covering Google Gemini, NotebookLM, Claude, and JusBrasil. Includes use-case mapping across the firm's 13 practice areas, a filterable activity matrix, and a dark Art Deco aesthetic aligned to the firm's brand. Delivered as a self-contained HTML file, requiring no installation.

Legal Process Monitoring Agent · Python · FastAPI · Next.js · TypeScript · WebSocket · Recharts

Automated judicial-process monitoring system for EAZ. FastAPI backend classifies and prioritises events by urgency; Next.js real-time dashboard streams updates via WebSocket with reconnect logic and a demo fallback. Features per-party stats, expandable event cards with deadline indicators, and a 7-day activity chart. Frontend runs independently without the backend for demo purposes.

EAZ Institutional Website Redesign · HTML · CSS · JavaScript · Git

Full redesign of the firm's institutional website with a premium Art Deco aesthetic (deep black and gold palette, Cormorant Garamond typography). Implemented attorney profile pages, SEO structured data (LegalService / Organization schema), mobile-responsive layouts, and smooth-scroll interactive menus Worked directly with the internal team throughout the process.
